

ISPS Code: Company Security Officer (CSO)

Marine Training Services

SAFETY CENTRE

Industrial and Hazardous Safety Training

This four-day training course will provide company security officers with the training necessary to meet their obligations under the International Ship and Port Facility (ISPS) Code. Adopting practical approaches to interpreting and implementing measures will help ensure compliance with maritime security requirements. The course is compliant with current IMO requirements.

Who will benefit

This training is of value to everyone assigned as a company security officer who is responsible for overseeing fleet security and safety. This training provides a rapid and comprehensive programme that enables shipping companies to meet the requirements of the ISPS Code with security onboard their ships.

Many flag administrations have mandated specific ISPS Code training requirements which are met by satisfactory completion of this course.

This comprehensive programme will train CSOs in the specific responsibilities they have under the ISPS Code.

The ISPS Code has far-reaching implications for personnel assigned responsibilities for the security and safety of your ships. The requirements for a company security officer, and their roles and responsibilities, are important considerations. Lloyd's Register understands the complexities of the

company security officer requirements and provides tailored training to help you implement security management within your company.

This comprehensive programme will train CSOs in the specific responsibilities they have under the ISPS Code. Training begins with three days of comprehensive ISPS Code knowledge, fully immersing candidates in all elements of the Code. This forms the foundation for an expert company security officer. This is followed by a day of training that provides expertise in the specific requirements and duties to be carried out by company security officers, such as:

- organising and ensuring that ship security assessments are carried out and the findings used in the ship security plan development
- ensuring the development, submission for approval and, thereafter, the implementation and maintenance of the ship security plan

- enhancing security awareness and vigilance while ensuring security communication and co-operation between the ship's crew, company personnel and contracting governments
- undertaking internal audits and reviewing security activities.

Delegates will receive a certificate upon successful completion of the course.
