

ISPS Code: Company and Ship Security Officer (CSO/SSO)

Marine Training Services

Web: www.safetycentre.ng
Email: info@resourcechurchill.com

This three-day training course will provide company and ship security officers with the training necessary to meet their obligations under the International Ship and Port Facility (ISPS) Code.

Adopting practical approaches to interpreting and implementing measures will help ensure compliance with maritime security requirements. The course is compliant with current IMO requirements.

Who will benefit

This training is of value to everyone assigned as a company security officer who is responsible for overseeing fleet security and safety.

This training provides a rapid and comprehensive programme that enables shipping companies to meet the requirements of the ISPS Code with security onboard their ships.

Many flag administrations have mandated specific ISPS Code training requirements which are met by satisfactory completion of this course.

The ISPS Code has far-reaching implications for personnel assigned responsibilities for the security and safety of your ships.

The requirements for a company and ship security officer, and their roles and responsibilities, are important considerations. Lloyd's Register understands the complexities of these

requirements and provides tailored training to help you implement security management within your company. This comprehensive programme will train company and ship security officers in the specific responsibilities they have under the ISPS Code. Our training begins with comprehensive ISPS Code knowledge, fully immersing candidates in all elements of the Code. This forms the foundation for expert and practical company and ships security officers. This is followed by training that provides expertise in the specific requirements and duties to be carried out, such as:

- organising and undertaking ship security assessments, and the findings are implemented into the ship security plan
- managing the implementation and maintenance of the ship security plan
- enhancing security awareness and vigilance while ensuring security

communication and co-operation between the ship's crew, company personnel and contracting governments

- assessing security drills, exercises and the roles of the crew
- co-ordinating and ensuring the security of cargo handling operations
- undertaking internal audits and reviewing security activities.

Delegates will receive a certificate upon successful completion of the course.
